:q!  Quit without saving
```

Git bash survival guide

Note: The angle brackets just marks a name. It could be any name. Example: `mkdir name_of_folder`

```
mkdir <name>     Create a folder

cd ..            Move out of folder (Step up one level)

cd <name>  Move into folder <name>

touch <name>     Create an empty file called <name>

vim <name> Start editing new or existing file in the vim editor

rm <name>  Remove a file

rm -rf <name>    Remove a file or a folder including its sub folders

ls               Print content in the folder you are standing in

ls -la              Print content including hidden files as a list

Ctrl-L              Clear the terminal
```
